| S.5 | Incentive Mechanisms and | A Proof-of-Stake (PoS) consensus mechanism | | |
| | Applicable Fees | incentivizes validators to secure the network and | | |
| | | validate transactions by staking their own crypto- | | |
| | | assets as collateral. Validators are selected to create | | |
| | | new blocks based on the amount of cryptocurrency | | |
| | | they hold and are willing to 'stake', rather than | | |
| | | through computational power. If validators act | | |
| | | honestly, they earn rewards through transaction | | |
| | | fees; however, malicious behavior or proposing | | |
| | | invalid blocks can lead to a reduction of their staked | | |
| | | assets, creating an economic penalty that | | |
| | | discourages misconduct and ensures network | | |
